

# D200 "COMPETITOR" SERIES, with BACK CHECK

Now **3** Control Valves: Back Check, Closing Speed and Latching Speed, fully adjustable after installation.

- The back check helps prevent damage to the door, door hardware, or adjacent wall surfaces.
- Activating the back check is easy!

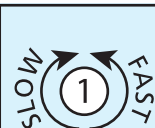

## BACK CHECK

- To Increase back check force, turn regulating screw clockwise, 1/4" turns.\*
- Adjustable back check after 70° to prevent the door from slamming open.

\*Do not use abrupt back check or expect door closer to act as a door stop.

## CLOSING

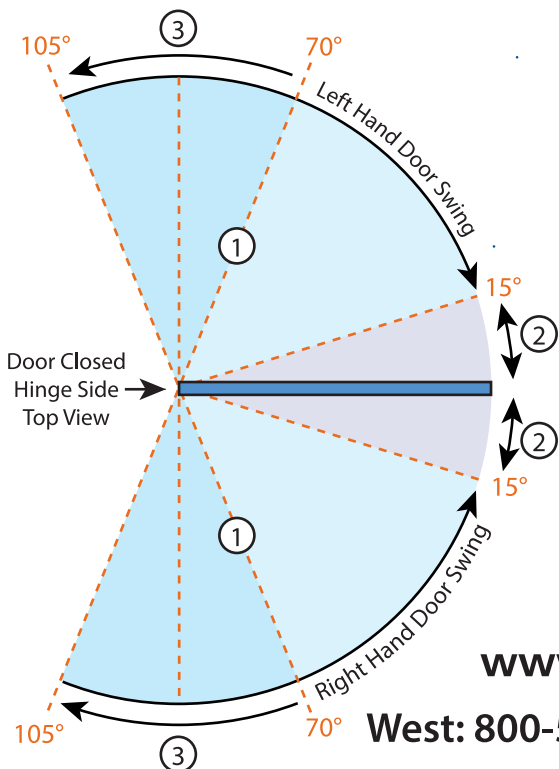

- Turn speed regulating valve clockwise to slow speed, counter clockwise to increase speed.
- The closing regulating valve is used to adjust the door swing speed from full open to 15° from the latch.

## LATCHING

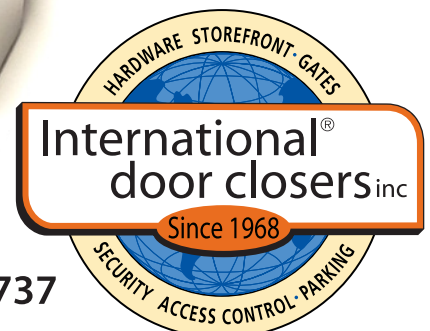

- Turn speed regulating valve clockwise to slow speed, counter clockwise to increase speed.
- The latch regulating valve is used to adjust the latch speed 15° from the latch to be fast enough to latch the door but not slam it.
